

Adult Kentucky Treatment Outcome Study

2018 FINDINGS AT A GLANCE

The number 2018 is rendered in a large, bold font. Each digit is filled with a dense, multi-colored pattern of small dots and speckles in shades of red, green, blue, and yellow, giving it a textured, mosaic-like appearance. The number is positioned at the bottom of the page, spanning most of the width.

Introduction

This Findings at a Glance summarizes results from the 2018 Adult Kentucky Treatment Outcome Study annual report. The Kentucky Treatment Outcome Study (KTOS) is an important part of the Department for Behavioral Health, Developmental, and Intellectual Disabilities, Division of Behavioral Health's performance-based measurement of treatment outcomes in Kentucky's communities. Results for this study included analysis of self-report responses for 1,224 clients who participated in publicly-funded substance abuse treatment from July 2015 through June 2016 and then completed a follow-up interview about 12 months later (an average of 313 days). There was a low refusal rate for follow-up participation (0.1%) and a high follow-up rate (76.5%) out of those clients who were eligible for follow-up and were randomly selected for the sample. For more information on KTOS or findings from the full report, visit cdar.uky.edu/ktos.

Characteristics of KTOS Clients Included in the Follow-up Sample

Of the 1,224 clients who completed a 12-month follow-up interview:

- Half (53%) were male.
- The majority were White (93%). A minority were African American/Black (5%) and 2% were Hispanic, American Indian, or multiracial.
- They were an average of 35 years old at the time of the intake interview
- Not quite half (43%) were married or cohabiting at intake.
- Over half of clients (57%) reported they had at least one chronic health problem.
- Chronic pain was reported by 41% of clients.
- Over three-quarters of clients (77%) had health insurance through Medicaid.

Past-12-month Substance Use^a

The number of clients who reported substance use decreased significantly from intake to follow-up.

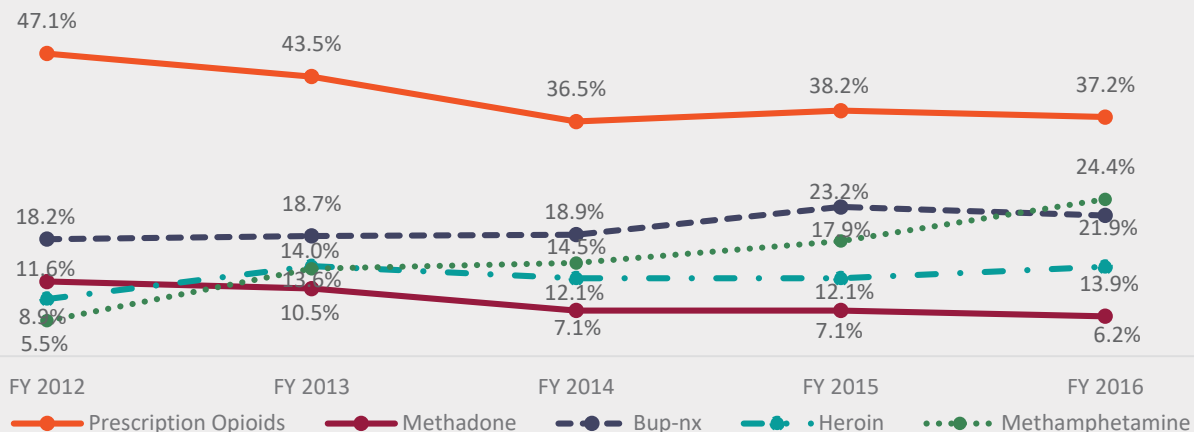

^a Because being in a controlled environment inhibits opportunities for alcohol and drug use, clients who were incarcerated all 365 days before entering treatment were not included in the substance use analysis (n = 17). In addition, 13 cases were excluded because either the interviewer skipped the question (n = 9) or the client didn't know (n = 4).

^b Misuse of opioids other than heroin, including prescription opiates, methadone, and buprenorphine-naloxone.

How Much Has Use of Specific Illegal Drugs Changed Over Time?

This trend analysis examines the percent of KTOS clients who reported misusing prescription opiates/opioids, non-prescribed methadone, non-prescribed buprenorphine-naloxone (bup-nx), heroin, and methamphetamine in the 12 months before entering treatment from FY 2012 to FY 2016.

Past-12-month Mental Health and Stress

Clients' mental health symptoms improved significantly from intake to follow-up.

Trends in Past-30-day Perceptions of Poor Mental Health

The average number of days clients reported their mental health was not good in the past 30 days has increased at intake in the past several years. The average number of days clients reported their mental health was poor in the past 30 days at follow-up has decreased from 9.4 days in FY 2011 to 5.6 days in FY 2016.

^c Measure of symptoms in the past 7 days. Higher scores on the Stress-Related Health Consequences scale indicate higher stress and greater physiological indicators of stress. The highest possible score is 36 and the lowest possible score is 0.

Past-12-month Economic Indicators

KTOS clients showed improvements in economic and living circumstances from intake to follow-up.

Gender Differences in Current Employment

Gender Differences in Full-time Employment

The number of men who reported they were employed full-time was 1.5 times as high as the number of women at intake and at follow-up.

Gender Wage Gap

At follow-up, employed women made only \$0.81 for every dollar employed men made.

Therefore, the gender wage gap for employed clients was **19¢**

Trends in Difficulty Meeting Basic Living in the Past 12 Months

The percent of KTOS clients who have reported difficulty meeting basic living needs at follow-up has decreased over time. The percent of clients reporting difficulty meeting basic living needs at follow-up decreased from 53% in the KTOS FY 2011 report to 30% in the KTOS FY 2015. The percent of clients reporting difficulty meeting basic living needs at follow-up increased slightly to 35% in FY 2016.

Past-12-month Criminal Justice System Involvement

Involvement in the criminal justice system, in terms of being arrested, incarcerated, or under the supervision of the criminal justice system decreased significantly from intake to follow-up.

Trends in Any Arrest in the Past 12 Months

The number of clients reporting an arrest in the past 12 months at intake has remained stable over the past 10 years with over half of clients reporting an arrest. Between one-quarter and one-third of clients reported an arrest at follow-up since FY 2007.

Past-30-day Recovery Supports

Compared to intake, significantly more individuals reported they had attended mutual help recovery group meetings in the past 30 days at follow-up and had more people they could count on for support.

Trends in Clients Attending Mutual Help Recovery Meetings in the Past 30 Days

With the exception of FY 2007 when the number of clients reporting attending mutual help recovery group meetings was higher at intake than follow-up, more clients reported attending meetings like AA/NA at follow-up compared to intake. Overall, around one-third of clients reported attending meetings at intake and around half reported attending meetings at follow-up.

Program Satisfaction

At follow-up, clients were asked to rate their level of satisfaction with the treatment program on a scale from 1 (worst treatment imaginable) to 10 (best treatment).

KTOS clients were satisfied with the overall program service and agreed that:

The client was encouraged to talk about and decide their program goals

Staff helped them obtain information so they could take charge of managing their drug/alcohol problems

Clients felt better about themselves as a result of treatment

Even if they had other choices, they would go to the same treatment program again if they needed to

Cost Savings of Substance Abuse Treatment

Using national estimates of the cost of substance abuse and applying them to clients' substance use before and after program participation, there was an estimated \$3.46 return in cost savings for every dollar spent on providing treatment services.

Conclusion

The 2018 KTOS evaluation indicates that publicly-funded substance abuse treatment programs in Kentucky have been successful in facilitating positive changes in clients' lives in a variety of ways, including decreased substance use, decreased mental health symptoms, decreased economic hardship, and decreased involvement with the criminal justice system. Results also show that clients have more support for recovery after participating in treatment. Overall, KTOS clients had significant improvements in key factors that have been associated with facilitating recovery.
